Topics

1. Sport and leisure infrastructure management
2. Total quality management
3. Sport and leisure infrastructure in Mozambique
4. Future development of sport and leisure infrastructure

Content and Conclusions

Ad. 1

Sport and Leisure Infrastructure Management is a sector of economy and important profession for development of sport and infrastructure. Most important goals of the sector are: sustainable development, efficient social management, new infrastructure technologies and innovative programs. Sport and leisure infrastructure encompass: facilities, communal infrastructure, water & power supply systems, waste management infrastructure, transport, communication, security and other systems. There are several hundreds of different types of sport and leisure infrastructure (facilities). In different countries they have variety of legal forms of the sport and leisure management: public institutions, public companies, professional non-profit organizations, municipalities, sport clubs and associations, private companies and other forms. Most important elements of the future development of the sport and leisure infrastructure management are: education programs, professional training, executive consultancy, standardisation, certification, professional publication and new types of communication.

Ad. 2

Total Quality Management is important part of the professional planning, building, managing and maintaining the sport and leisure infrastructure. It must be introduced in all processes which enable high quality of the facilities and services provided in these facilities. Employees must be educated and professionally trained to fulfill high international standards and support the system of providing quality services for the users.

Ad. 3

Bigger cities in Mozambique like Maputo, Nampula, Beira, Pemba, Lichinga, Quelimane, Tete and Chimoio, have more developed sport and leisure infrastructure. Sport facilities in smaller cities and around the country are not good. Most of the infrastructure is not properly financed, professionally managed and maintained. Those are the main reasons why sport and leisure facilities are not in good shape and can not provide quality programs and services. This infrastructure can also not provide quality services for school sport education, sport for all, recreation, tourism, events and other programs.

The Development Program of the sport and leisure infrastructure in Mozambique must encompass:

- Network of National and Regional Sport Centers in Mozambique,
- System (standards) of planning, building, managing and maintaining sport and leisure infrastructure,
- Catalogue of Sport Centers in Mozambique,
- Educational program "School of Sport and Leisure Infrastructure Management" and professional training and executive consultancy programs.

Ad. 4

Future development of sport and leisure infrastructure will be based on the following basic elements:

- reconstructions and modernization of existing sport and leisure facilities and centers,
- reorganization and renovation of the programs introducing new innovative programs especially for children, women and elderly people.
